

Gram Training Center

Course Description

Filter Technique with Process Ventilation

Purpose: In the course we show and explain the existing filter medias and cleaning principles based on their ability for different process types.

This will be connected to the practical choice and dimensioning of the appropriate filter unit for the most common dust, smoke and steam types.

Participants: The course is meant for engineers, sales technicians, project managers and others, who wants a deeper knowledge of relevant filter principles and filter installation types in process ventilation.

Content: *In the course Filter Technique we will show and explain the different filter medias based on their ability for different process types.*

We will demonstrate filter medias for both depth and surface filtration, as well as their usage in different filter types. The filter types will be related to dust types and dust volume.

For cleanable filter medias we will show the cleaning systems, and give you guiding values for dimensioning of filter installations.

For Gram-installation types there will be a practical demonstration in the Gram Training Center.

Dates: As required

Duration: Approximately 3 hours plus lunch and eventually a tour through the production units

Course fee: None (lunch included)

Place: All courses are held at Gram Training Center, Lysbjergvej 10, Hammelev, DK-6500 Vojens

Registration: Please contact our Sales department under sales@gramcleanair.com
